NEWS RELEASE

April 30, 2009

SEGO TITAN 24 IP SURVEY UNDERWAY

Sego Resources Inc. is pleased to announce that a Titan 24 Induced Polarization (IP) Survey is now underway at its Miner Mountain Project. The Titan 24 IP system is noted for its ability to offer 3-D imagery and to reach depths of 750 metres to over 1500 metres.

The Miner Mountain Project is a copper gold porphyry property located near Princeton, B.C., and is 15 kilometres north of Copper Mountain Mining Corporation's former copper producer (closed 1996) that is scheduled to resume production in mid 2011, following a recent favourable feasibility study. The Miner Mountain Project is situated within the traditional territory of the Upper Similkameen Indian Band with whom Sego has a memorandum of understanding. The Miner Mountain property is 2400 hectares in size.
